

# Laravel 4

JumpStart Coded Laravel

**SOGOJES COMPANY**

August 6, 2014

Authored by: Mohammad Syafiq Mhd Hussain

## Laravel Installing

1. Download Composer , Install Composer  
[Composer](#) for Windows
2. Install Wamp,Xampp for webserver
3. Make sure Wamp/Xamp can be used and up in localhost

## Laravel Setting

1. Assume we use Wamp as web server , go to www in C: and create folder name **website**
2. Rig click on folder name **website** and pick “ **Use Composer here**”
3. Type this command *composer create-project laravel/laravel ./ --prefer-dist*  
#Create project name Laravel[changed what u want]

```
C:\Windows\System32\cmd.exe

Basic usage: composer <command>
For more information just type "composer".

C:\wamp\www\syafiq>composer create-project laravel/laravel ./ --prefer-dist
Installing laravel/laravel (v4.2.0)
